

A WORLD LEADER IN FUME
EXTRACTION TECHNOLOGY

AD 4000

Last Updated on 01.02.2022

High airflow laser fume extraction system for the laser marking, coding and engraving industries.

BOFA's AD 4000 laser fume extraction unit combines large filter capacity with high airflows. This combination makes the AD4000 ideal for large laser engravers, laser cutters as well as multiple laser coding installations.

Easily accessible filters are accommodated by the uniquely styled gas spring assisted 'gull winged' doors, which allow for maximum space and ease when changing filters. Unit interfaces such as stop/start and system failure are available as options.

Where applicable, the carbon used in BOFA units is capable of removing a wide range of VOCs, however it is the responsibility of the user to ensure the carbon is suitable for their application. For specific applications, please contact us for details.

Important Notice: Many factors beyond the control of BOFA can affect the use and performance of BOFA products in a particular application, including the conditions under which the product is used. Since these factors are uniquely within the user's knowledge and control, it is essential the user evaluate the products to determine whether the product is fit for the particular purpose and suitable for the user's application. All products, product specifications, availability and data are subject to change without notice, and may vary by region or country.
