

DENSO

***50th Anniversary of
Robot Development***

50th Anniversary of Robot Development

DENSO is pursuing the creation of environments where people can work in a manner befitting human beings and productivity. Our concept of production with the focus on human beings is the starting point for the development of robots. We apply our experience of production technologies at in-house production sites in our continuing effort to create high-performance robots that are easy to use. As we are approaching the 50th anniversary since we began development, we have sold approximately 100 thousand robots. DENSO robots will continue to work and prove their worth in the future.

1967

To enable people to work in environments befitting human beings

In 1967, DENSO began development of DENSO robots with the aim of freeing employees from the burden of dangerous work and working in adverse environments. Appearing in 1969, the first practical unit was a robot designed for aluminum die-casting work. This freed workers from exposure to the heat produced by die-casting processes and led to improved quality through repeated robot movements and enhanced productivity through unmanned operation.

Aluminium die-casting operation robot

1985

Continuing refinement at in-house factories

In pursuit of improved productivity, DENSO Robotics has promoted practical implementation of horizontally and vertically-articulated robots in in-house auto-parts assembly processes. We have reflected the experience gained through the introduction of robots on production lines with stringent quality, delivery and cost requirements to realize dramatic evolution in robot performance. At the present time, DENSO has introduced more than 18,000 robots in its in-house factories.

Mid-sized 4-axis robot

1991

Introduction of robot technology to the world

Based on the ambition of "making major contributions to the world with robot technologies refined in-house," DENSO launched fully-fledged outside sales in 1991. We have taken on board customer needs obtained directly from production sites to improve performance and add new functions. As a result, DENSO robots are now widely used not only in the auto-industry, but also electrical and electronic industries, food processing and pharmaceuticals.

Mid-sized 4-axis robot HM (1st generation)

1998

Greater ease of handling

1998 saw the adoption of the world's first use of Graphical User Interface (GUI) in teaching pendant control panels in the robot industry (*). The resulting intuitive easy-to-understand UI has improved user operability and reduced the time consumed by robot introduction, adjustment and maintenance. The GUI has further evolved into the current CR8 controller. *According to our research

Teaching pendant with GUI

2014

Provision of safety and quality in the fields of food processing and medical treatment

The year 2014 saw the development of VS-050S2, a robot compatible with sterile environments. It is now possible to automate drug dispensing and discovery processes and prevent exposure of workers to hazardous substances and other dangers. The Fraunhofer-Gesellschaft research institute has verified the high level of hygiene of VS-050S2. (Report No.DE1409-725)

Medical and pharmaceutical robot VS-S2 series

2016

Achievement of the ultimate basic performance

Robot performance may not be estimated with catalog values. Fully committed to on-site "usability," in 2016, DENSO Robotics developed the HSR Series, a lineup of new high-speed SCARA robots in pursuit of the basic performance elements of "quick acceleration", "runs continuously", and "stops precisely" DENSO Robotics will continue to meet the challenge of going beyond the limits of performance.

DENSO 4-axis robot HSR series

2018

For more creative work

Do you need that extra hand? Do you want to leave simple tasks to robots, and make more time for creative work? COBOTTA will open infinite possibilities to address your needs, and realize creative, new ideas.

Robot list

Standard type

This type is used in standard environments.

Protected type (IP67)

Usable in places requiring environmental resistance and suitable for work in the environments where equipment might be exposed to water (equivalent to IP67)

Dust & splash proof type (wrist: IP65 / unit: IP54)

Suitable for the work environments where equipment may be exposed to dust or water droplets, and the wrist has the dust & splash proof performance of IP65, while the body, IP54. Also usable in the vicinity of the processing machine, where equipment might be exposed to oil or mist.

Cleanroom type

Specification best suitable for automated and energy-saving production system in clean room, and ideal for electronic parts, food, and medical device-related work in clean room to realize the dust proof by highly-sealed structure as well as high cleanliness and high performance.

UL specifications

UL/cUL certified products

H₂O₂-resistant

Robot with sterility control for use in sterile environments and clean environments that employ H₂O₂ gas 35% density (dry/wet) and UV exposure.

VS SERIES

Features of VS-050 / 060 / 068 / 087

More speedy, more compact, and easier to use.

Slim design robots featuring top-performing speed in its class with significantly-improved eases of use.

Series Lineup

VS-050

VS-060

VS-068

VS-087

Maximum arm reach	505 mm	605 mm	710 mm	905 mm
Maximum payload	4kg	4kg	7kg	7kg

Speed = Improved Productivity

	VS-050	VS-068
Cycle time [sec] For 1kg (measurement)	0.35	0.31

Time required for a robot to lift an object to a height of 25 mm and move back and forth between two locations 300 mm apart.

Fits into Compact Equipment

Arm width / Wrist width / Workable space

VS-050

VS-068

Improved Usability and Maintainability

Embedded internally up to end-of-flange, wires are prevented from becoming entangled and broken (when communication interface flange-A is selected).

Options

Connector panel

Rear connector panel Bottom connector panel

Choose from two mounting orientations when connecting cables (motor & encoder cable, etc.) to the robot for increased flexibility to accommodate the robot installation conditions.

Flange

Communication interface flange-A

Plate mechanical interface has connectors for electrical signal lines and EtherNet, allowing wiring to be embedded in the robot unit.

Signal lines / Air pipe solenoid valve

Signal lines and air pipe solenoid valves are embedded in the top of the second arm. Three varieties are available for VS-068 / 087 and one for VS-050 / 060.

Paint / Surface finish

Standard type Clean, IP54 IP67

"If the protected type (IP67) is selected, the unit is left as aluminum. Standard paint is available in the special specification (option) when selecting IP67."

User Options

External battery extension unit

Encoder backup battery installed outside the robot. Facilitates replacement of batteries and improves maintainability.

Brake release unit

A switch that allows you to release the brake of each axis (the wiring of this switch is directly connected to the brake release signal of each axis).

Air purge unit

The protected type (IP67) maintains an IP67 protect grade by air pressure produced inside the robot.

Second arm cover (Right-hand, with tapped holes)

This cover has tapped holes to secure wires for the robot's second arm.

VS-068 / 087

Boasts top-performing speed in its class to greatly improve productivity. Slim arm of wide movable range enables various types of robot layouts.

Maximum arm reach	710 / 905mm
Maximum payload	7kg
Cycle time	0.31 / 0.34 sec
Position repeatability	±0.02 / 0.03mm

VS-087

Specifications

Term		Specifications	
Model		VS-068	VS-087
Axes		6	
Position detection method		Absolute encoder	
Drive motor / brake		All-axis servo motor / all-axis brake	
Total arm length (No. 1 arm + No. 2 arm)		680 (340+340)mm	875 (445+430)mm
Maximum motion area (Point P)		710mm	905mm
Motion range	J1 (No.1 axis)	±170° ⁴	
	J2 (No.2 axis)	+135°, −100°	
	J3 (No.3 axis)	+153°, −120°	+153°, −136°
	J4 (No.4 axis)	±270°	
	J5 (No.5 axis)	±120°	
	J6 (No.6 axis)	±360°	
Maximum payload		7kg	
Maximum joint speed	J1	356.25deg/sec	285deg/sec
	J2	303deg/sec	252.5deg/sec
	J3	378.75deg/sec	303deg/sec
	J4	475deg/sec	378.75deg/sec
	J5	475deg/sec	378.75deg/sec
	J6	760deg/sec	606deg/sec
Cycle time (*1)		0.31sec	0.34sec
Position repeatability (center of end-effector mounting face) ²		±0.02mm	±0.03mm
Maximum allowable moment of inertia	J4,J5	0.45kgm ²	
	J6	0.1kgm ²	
Maximum allowable moment	J4,J5	16.2Nm	
	J6	6.86Nm	
Signal line / Air pipe solenoid valve (option)	Signal lines	10 (for proximity sensor signals, etc.) ^{5,6}	
	Air pipe solenoid valve ³	7 systems (φ4 × 6, φ6 × 1) [solenoid valves can be selected from 1 to 3] 1. 3 × solenoid valves (2 position, double solenoid) 2. 3 × solenoid valves (3 position, exhaust center solenoid) 3. 3 × solenoid valves (3 position, closed center solenoid)	
Communication interface flange-A (option)		17 (power wire for cameras, etc.) ⁶	
		LAN×1(1000BASE-T) ⁷	
Air source	Normal pressure	0.20 to 0.39MPa	
	Maximum allowable pressure	0.49MPa	
Airborne noise (equivalent continuous A-weighted sound pressure level)		65dB or less	
Protection grade		Protected type : IP67 ⁸ (option) Dust & splash proof type : wrist IP65 / unit IP54 (option) Cleanroom type : ISO class 3 / 5 (option)	
Weight		Approx. 49kg	Approx. 51kg

1: Time required for a robot to move a 1 kg payload between two points 300 mm apart at a height of 25 mm. 2: Position repeatability is the precision at constant ambient temperature.

3: Controllable by use of the embedded solenoid valve only for φ4×6. 4: Limited motion range when wall mounted. For details, please contact our sales representative.

5: There are 4 of these lines (proximity sensors or other signal lines) when selected together with communication interface flange-A. 6: Allowable current is limited.

7: The LAN cable to connect to the connector panel is 20 m or shorter. 8: The robot interior is air-pressurized to maintain protective class IP67. Use the air-purge unit to remove air. Do not use the robot underwater.

Medical and Pharmaceutical Robots

VS-050S2 series (features)

DENSO contributes to automation in medical device / medical product manufacturing and drug preparation.

DENSO delivers a robot that meets the strict demands of the pharmaceutical and medical industry. Automation in clean environments prevents the hazards of foreign matter contamination from manual tasks, human error, and operator exposure.

Sterile environment resistance

Robot for use in sterile environments and clean environments that employ H₂O₂ gas 35% density (dry / wet) and UV exposure.

Resists Contamination

Smooth surface prevents adherence of dust and dirt. The robot arm is constructed without external screws to maintain high sanitation levels.

Cleanliness : ISO Class 5

Protection level : Wrist IP67 / Unit IP65

Authentication

- Design compliant with GMP* (product management and quality control standard).
*GMP grade A
- cUL certified products (UL standard / Canada CSA standard) also available.
- Hygiene proven through testing by the Fraunhofer Institute (Report No. DE 1409-725).

Isolation (suitability for sealed environments)

Cables and other connector panels are positioned on the bottom for compatible installation in sealed and quarantine environments.

Examples of Applications

Automation of cell culture

- The movements of skilled workers are reproduced by robots to realize the automation of high-quality cell culture without variation in quality caused by operators.
- The hazards of foreign matter from manual tasks, human error, and operator exposure are avoided, and a clean and safe system is realized.
- Robots can reproduce the same function as the manual operation by operator, such as opening the pipetting cap, using general-purpose tools.

Options

Electric gripper connection flange specification-A

Internal mount with a gripper cable up to the flange. Suitable for clean environments, eliminates interference with peripherals.

External mount battery

Optional external mount battery for improved maintainability and battery replacement.

Medical and Pharmaceutical Robot Hands (option)

Features

Electric gripper

Electric gripper cover kit

- Sterility resistance :
H₂O₂ gas (35% density) and UV exposure compliance
- Cleanliness :
ISO Class 4 (GMP Grade A/B)*
- Made with FDA-certified material

*Mounting on the robot depends on the robot specification.

Specifications

Term	Specifications
Grip force	60 N
Switch stroke	2 × 3 mm
Power supply	24 V ±10%
Protect grade	IP65
Cleanliness	ISO Class 4 (GMP Grade A/B)
I/O type	NPN / PNP selection
Unit weight	480 g (Hand unit / cover)*

※The weight does not include the chuck. Prepare the chuck by yourself.

1: One cycle is the time taken to move an object at a height of 25 mm between two points 300 mm apart. 2: Position repeatability (center of tool mounting surface) is the precision at constant ambient temperature.

3: "—" "****", "*****", and "*****" in the model indicate the Z axis stroke. 4: The bellows type, dust & splash proof type and cleanroom type cannot be selected for a 100mm vertical stroke.

5: The HSR® Series and HS-A1 Series are ISO Class 3, while the HS Series are Class 10 (0.1µm) 6: Standard/Dust- and splash-proof types 7: Expected to be released in 2017.

Robot list

Standard type

This is a standard type used in standard environments.

Ceiling type

Ceiling mount structure eliminates a waste of space, minimizes the entire equipment space, and expands the workable space

Bellows type

The Z-axis shaft of the standard type is mounted with a cover.

Dust & splash proof type (IP65) / H1 grease type

Suitable for the work environments where equipment may be exposed to dust or water droplets, and the dust & splash proof performance of IP65 is provided. Also usable in the vicinity of the processing machine, where equipment might be exposed to oil or mist.

*Only the H1 grease type may be selected for the HSR dust and drip-proof type.

Cleanroom type

Specification best suitable for automated and energy-saving production system in clean room, and ideal for electronic parts, food, and medical device-related work in clean room to realize the dust proof by highly-sealed structure as well as high cleanliness and high performance.

UL specifications

UL/cUL certified products

HSR SERIES

Features of HSR048 / HSR055 / HSR065

Quick Acceleration, Runs Continuously at High Speed, and Stops Precisely.

In pursuit of the ultimate performance, the HSR Series features "true high speed," realizing a compact, space-saving, high-speed picking system to handle processes such as conventional components assembly, the packaging of food, pharmaceuticals, or cosmetics, etc. to innovate the work place.

High-speed motion

High acceleration & motion profiles

Improved CPM (cycle per minute) allows the robot to move at high speed continuously.

*The CPM changes depending on the coordinates.

Continuous motion

Achieving non-stop continuous motion

Improved heat dissipation performance at the base unit allows the robot to achieve continuous motion, which is required in actual processes.

Vibration control

Vibration control technique for suppressing vibrations

The robot can suppress vibrations in a short time by actively reflecting the status of the arm to vibration control. This can suppress vibrations that occur with high-speed transfer and residual vibrations, reducing the cycle time.

RC8A controller

Time

Light weight

Newly designed, highly rigid, lightweight arm

The combination of between high rigidity and light weight allows the robot to achieve a high payload (8 kg) and high-speed motion at the same time.

Improved flexibility in mounting direction

The mounting direction can be switched

Floor and ceiling mount models available.

Optimum layout

Optimized layout allows the robot to achieve high-speed motion.

A large-capacity motor is integrated into the base unit. Weight reduction at the tip of the arm and optimized arm structure allow the robot to improve its high-speed performance.

Options

Wiring sub-arm protection kit

Protects external wiring to prevent cables from becoming unorganized and avoid the risk of broken wires.

Built-in Ethernet

An Ethernet cable is built into the body. Easily connectable to external devices
*Ethernet connectors (sold separately) are available as options.

External battery

The encoder backup battery installed outside the robot facilitates easy replacement of batteries and maintenance.

Stopper with wiring protector

This stopper can protect wiring that is installed through the hole of the bearing located at the top of the Z-axis shaft.

HSR SERIES

RC8A ▶ P.46

HSR048 / 055 / 065

Quick Acceleration, runs continuously at high speed, and stops precisely. "True high speed" has been realized in pursuit of this ultimate basic performance. Improved CPM (Cycle Per Minute = Work load per minute) enables high-speed and prolonged motion.

HSR®055

Arm reach	480 / 550 / 650 mm

**Anywhere, anytime,
hassle-free.
A robot that
collaborates with
everyone.**

With the initial purpose of increasing the productivity of our own automobile component manufacturing facilities, we have been developing DENSO robots for 50 years. Today, we introduce the new industrial collaborative robot "COBOTTA".

The human-friendly, compact, and portable design allows you to take COBOTTA anywhere, and automate tasks right away. No expert knowledge is required, making operation amazingly easy.

Do you need that extra hand? Do you want to leave simple tasks to robots, and make more time for creative work?

COBOTTA will open infinite possibilities to address your needs, and realize creative, new ideas.

1

safety design

Safe shape and movement

Collaborative robots do not require safety fences. The unique outer contour has no sharp edges, and consists of curves that prevent hands from getting caught. Sensors are built into the six moving parts for constant monitoring of speed and torque, to guarantee safety from a functional aspect (planning to obtain certification from a third-party certification authority).

*See the notes on P.38.

2

portable body

Transportable immediately to sites with staff shortages

The main unit weighs approximately 4 kg providing easy portability, and offers a load capacity of 500 g. The integrated controller not only reduces wiring, but also allows consolidated control with other devices. ORiN is supported as standard.

3

easy to use

Simple teaching with no memorization

Equipped with a direct teaching function and an intuitive GUI for easy programming. An optional camera can be mounted to enable teaching using the camera. COBOTTA is user-friendly even for those who don't get used to robots.

4

open platform

Infinite possibilities

The integrated controller is open, and COBOTTA's control API is made public, allowing creators to develop their own applications in the environment they choose (*OSS version). The robot is compatible with JAVA, Ruby and other diverse development languages and is connectable to all kinds of devices. COBOTTA is furnished with a high level of expandability to fully satisfy the wishes of professionals.

CVR038

Anywhere, anytime, hassle-free.

A robot that collaborates with everyone.

Small portable body with a user-friendly form.

This robot can be easily taken anywhere to automate work immediately.

Maximum arm reach	342.5 mm
Rated payload	0.5 kg ²
Position repeatability	±0.05 mm

[Notes] This product is an industrial robot capable of operating in collaboration with human beings. Before using the product, the user should carry out risk assessment in accordance with regulations and standards including relevant laws and ordinances, notices, guidelines and ISO12100:2010 and perform thorough risk mitigation. In addition, the user should check compliance with laws, ordinances and standards pertaining to the operating environment.

Safety Motion Function

Safety function that allows humans and robots to work in a shared area

Supported controller RC8A

Overview

The safety function monitors and controls the robot operation status to realize safe and highly-productive robot equipment.

1. Monitor the motion area

Robot motion area is limited to monitor the motion is within the limited area.

- Small-sized equipment Mutual access to the work area common to human and robots

2. Monitor the speed

Robot speed is controlled to monitor the robot speed is slower than the speed limit.

- Continuous motion as maintaining the safe speed is enabled even when human approaches the robot.

3. Monitor the robot stop

The stop status of the robot is monitored without shutting down the motive power.

- Smooth recovery of robot motion when human leaves the common work area is assured to improve the productivity.

Use scenarios

Robot motion area is limited to enable mutual approach to the work area common to the human and robots.

When entry of a human into the set motion area is detected by devices such as laser scanners, the robot speed is limited to the specified safe speed or less to enable continuous production. The robot stops moving when the human enters the stop area.

Safety Function

Name	Details
STO (Safe Torque Off)	Function for immediate shutdown of the motor power
SS1 (Safe Stop 1)	Function to shut down the motor power after slowing down and stopping the robot
SS2 (Safe Stop 2)	Function to leave the power on after slowing down and stopping the robot
SOS (Safe Operating Stop)	Function to monitor the robot does not move from the stop position
SLP (Safely-Limited Position)	Function to monitor the axes do not exceed the soft limit

Name	Details
RSM (Robot Speed Monitoring)	Function to monitor the robot's specified sections do not exceed the specified speed.
RPM (Robot Position Monitoring)	Function to monitor the robot's specified sections do not exceed the specified motion area
SBC (Safe Brake Control)	Function to turn off the external brake power and lock the brake

*Equipment must be used only after performing risk assessment, implementing safety measures, and checking that hazard to humans is thoroughly prevented.

Motion controller suited to developing custom robots based on the RC8 robot controller.

Supports the development of custom robots

Allows for designing robots for any stage of production based on the customer's goals, conditions, and environment.

Exceptional Usability

Uses a RC8 interface specially adapted to robot control

WINCAPS®III

ORiN®2 SDK

Teaching pendant

Shorten startup time

- The off-line software and teaching pendant is the same for all current Denso robots. This allows for continued usage of familiar control systems reducing the need for additional training.
- Reduces worktime in the design of emergency stops, etc. by making use of the MC8's safety circuits
- Ease of use: Motor gain tuning can be performed automatically by the controller.

Maximum 8-Axis Control + Wide Expandability

Utilizes an RC8 provider to directly control various FA devices

Improving efficiency by integrating control

- Using ORiN allows usage of the RC8 provider functions. This makes integration of various FA devices much simpler. It also allows for control of any application in a standard program language and reduces development costs.
- Uses the same GUI as the RC8 providing greater ease of use.

Coordinates with various FA devices through the RC8 provider for expanded functionality

World-class safety

Joins the RC8 in supporting international safety standards

Standards / Authentication

- CE (Standard specification, Safety motion specification, UL specification)
- PLe / SIL3 (Standard specification) ● UL (UL specification) ● KC (MC standard specification)

Industrial Controller IPC8 Series furnished with the quality standards and expandability of RC8, the world's smallest robot controller

*Available for use in Japan only

Realization of the centralized control of devices

With IPC8, free selection of development environments or system configuration required in PC control is enabled.

OS

Free

Operating systems such as UNIX, Linux or unique real-time OS can be installed on the user side.

Windows Embedded Standard 2009

Pre-installation of ORiN2 SDK Runtime

Systems construction in development environments such as Visual Studio or LabVIEW is enabled.

Expansion Board ¹

- Parallel I/O board for expansion
- DeviceNet slave board
- PROFIBUS slave board
- PROFINET I/O device board
- CONTEC serial communications board <RS232C / 422 / 485> ²
- CONTEC motion control board ²
- DeviceNet master board
- CC-link remote device board
- EtherNet/IP adapter board
- EtherCAT slave board
- External axis board
- CONTEC analog I/O board ²
- CONTEC digital I/O board ²

1: Available only when Windows® Embedded Standard 2009 is selected.

2: To be supplied by customer.

Highly-reliable quality standards

The high-quality, high-reliability design enables PC control system construction that is ideal for FA environments.

- The stable supply of the industrial device identical to the robot controller ensures reliable long-term use.

Weight		Safety I/O-less specification, Standard specification: Approx. 10kg, Safety motion specification: Approx. 11kg ³									

1: Power for the 100 VAC specification is "Single-phase 100 VAC –5% to 110 VAC +10% 50/60 Hz, 1 kVA.

2: For Ver. 2.00 3: Does not include the supplied cables.

4: Specifications must be designated when placing an order.

Specifications cannot be changed after shipment.

Additional axis specifications are available for all controllers.

5: The UL specification is also required for the robot unit.

In addition, a pendant, mini-pendant or emergency stop button

box is required.

Please note that for VS-050 / 060 / 068 / 087 and HSR, a brake

release unit is required.

Compliant robot safety standards :

ISO 10218-1: 2011, ANSI/RIA R15.06-1999

UL standards UL1740, CSA Z434, etc.

Power output board	For 5V (0.5A) / 12V (1A) / 24V (0.5A) service power

Teaching pendant/mini pendant

These are input and operation devices for teaching, program creation or startup. Use in combination with WINCAPS®III enables efficient programming and teaching.

Teaching pendant

Mini-pendant

Features

- **Embedded with the large touch panel**
A 7.5-type TFT is embedded to realize simple visual check and operation with color display and touch panel.
- **Improved GUI for increased efficiency**
Easy-to-view menu configuration and user-friendly operability are realized. With improved GUI or functions, simulation of robot introduction can be checked on the pendant and work time can be reduced.
- **Mounted with an enable switch**
The pendant is mounted with a 3-position enable switch.
- **The screen can be customized using control panel functions.**
Control panel of robot and peripheral devices can customize the teaching pendant screen.
- **Protect grade**
Splash proof equivalent to IP65

Specifications

Term	Multifunction teach pendant	Mini-pendant ¹
Power	DC24V (Supplied from the controller)	
LCD	Liquid crystal display with back light, 7.5-type TFT color LCD, multi-function 640×480 pixels	Liquid crystal display: 128 x 64 pixels
Emergency stop button	4B contact, 4-circuit output (Forced-separation type)	
Dead man's switch (Enable switch)	3-position-type (OFF-ON-OFF), 2-circuit output	
Mode-switching switch	3-position switching with keys (AUTO, MANUAL, TEACHCHECK) Note: Mode is switchable only when using the pendant with keys	
Mounting conditions	Temperature: 0 to 40 degree C, Humidity: 90% RH or less (no condensation allowed)	
Protect grade	IP65	
Weight	1.6 kg or less (Not including the cable)	Approx. 0.3 kg (Not including the connection cable) (Note)
Cable length	4 m, 8 m, 12 m	

1: The mini-pendant itself cannot create or edit programs. Program creation and editing are performed using the WINCAPS®III Light, a mini-pendant accessory. The maintenance functions below are also furnished.

(1) CALSET operation (2) Motor encoder reset (3) Setting of the calendar and clock built in the robot controller (4) Setting of the date for next battery replacement (5) Brake release and operation

DENSO Robotics Main Functions

External axis control

Servo motors of any capacity can be controlled by expanding the EtherCAT master board (external axis).

System configuration diagram

Compatible servo motors

SANMOTION R ADVANCED MODEL EtherCAT / Manufactured by Sanyo Denki Co., Ltd.

SGD7S EtherCAT / Manufactured by Yaskawa Electric Corporation

Circular tracking

The conveyor tracking is compatible with circular conveyors. Robot tracking of workpieces moving in a circular orbit can be set using the Wizard-type GUI similar to the conventional linear conveyor tracking.

Supported Robots

All robot models compatible with RC8A or RC8

System configuration diagram

High-precision calibration (Hi-Cal)

Improved absolute precision and reduced variation in robot machine enables significant reduction of the worktime in teaching.

Benefits

The worktime in re-teaching when robots are exchanged is reduced.
Improved vision and correction accuracy of 2D/3D vision picking that is subject to rotation and posture change

Supported Robots

VS-050/060/068/087 standard type

Extended-joint support specification Option available at additional cost

Extended-joint support can be controlled with the same interface as the robot. Easy adjustment with auto gain tuning.

System configuration diagram

Main applications

Robot drive axis / servo hand, device to determine position

Supported Robots

Compatible RC8A and RC8 robots: All models

Conveyor tracking Option available at additional cost

Robot tracks the workpiece to Pick & Place without stopping the conveyor. Use a wizard-type GUI to easily adjust complex conveyor tracking. In addition, free curve interpolation control is also possible during conveyor tracking.

Sensor Tracking

Configure in 5 steps

Vision Tracking

Configure in 6 steps

System configuration diagram

Simple connection to commercially available image processing equipment

OMRON	FZ/FH/FZM1 / FQ2 series
Keyence	CV/CV-X / XG series
Sharp	IV series
Cognex	Insight series
Panasonic Industrial Devices	SUNX PV series
Matrox	Matrox Design Assistant
Baumer	VeriSens series

Main applications

Picking and packaging trays of food products / medical and pharmaceutical product workpieces

Supported Robots

Compatible RC8A and RC8 robots: All models

Compliance Control Function with Force Sensor Option available at additional cost

Feedback control from a force sensor and DENSO exclusive strength control algorithm enable detailed copying, fitting and press action. Dedicated GUI allows monitoring of feedback values from the force sensor and enables force control settings to be adjusted to aid reduction of man-hours to startup.

System configuration diagram

Models that support Wacoh-Tech inner force sensor

WEF-6A200-4-RCD	RS422 type	Load rating : 200 N
WEF-6A200-4-RCD-B	RS422 type	Load rating : 200 N
WEF-6A500-10-RCD-B	RS422 type	Load rating : 500 N
WEF-6A1000-30-RCD-B	RS422 type	Load rating : 1000 N

Supported Robots

All models of RC8A-, RC8-compatible DENSO 6-axis articulated robots. All models of RC8A, RC8-compatible 4-axis robots.

*Internal wiring can be used with VS-050, 060, 068, 087 communication cable flange specification A.

Main applications

Copying action at insertion of parts

Fitting needed in assembly

Press action such as applying constant pressure

Cooperative Control Option available at additional cost

Multiple small robots can be used, replacing one large robot. Two robots can handle higher payloads and manipulate larger tools, while still retaining the ability to work independently.

System configuration diagram

Main applications

Assembly of heavier and larger parts.

Supported Robots

All models of RC8A-, RC8-compatible DENSO 6-axis robots.
All models of DENSO 4-axis robots.

Exclusive control Option available at additional cost

Entry of multiple robots into excluded areas can be controlled.

*Maximum number of exclusion controllable robots is 4.

System configuration diagram

Supported Robots

Compatible RC8A and RC8 robots: All models

Virtual fence Option available at additional cost

Eliminates interference between robots and peripherals

*Applicable to multiple robots (2 max.) only when they are cooperated.

System configuration diagram

Main applications

Compatible RC8A and RC8 robots: All models

External TCP Option available at additional cost

Rotation around a defined center point of the workpiece allows for an easier method of teaching points and reduction of required positions

Deburring rectangular workpieces via stationary deburring tool

Main applications

Deburring and sealant coating

Supported Robots

All models of RC8A

Autofig

Automatically calculates the optimal “figure” for motion to a designated position resulting in reduction of setup time.

■ Movement from Point A to Point B

Before

Unable to detect optimal motion profile which resulted in unexpected motion.

After

Autofig automatically calculates the optimal path between A and B resulting in the most efficient path with no wasted motion.

Main applications

When used with a program that employs a palletize library

Supported Robots

Compatible RC8A and RC8 robots: All models

High-accuracy Path Control

Reduces path changes caused by variation in speed and uses arc motion and free curve interpolation control to improve path accuracy.

Main applications

Sealant and silicone adhesive coatings

Supported Robots

VP series
VS series : VS-050 / 060 / 068 / 087, VS-6556 / 6577
VM series, HSR® series, HS-A1 series
HM series, XR series

Singular Point Avoiding Function

Use for smooth movement when linear interpretation is required to pass a point at which a robot's position changes, such as in the vicinity of a singular point.

Main applications

Used with a program that employs a palletize library

Supported Robots

VP series
VS series : VS-050 / 060 / 068 / 087, VS-6556 / 6577
VM series

Collision detection

Detects a potential collision between the robot and any peripheral or workpiece and executes a robot emergency stop.

Main applications

Prevents damage to the workpiece and hand caused by erroneous operation during teaching

Supported Robots

VP series
VS series : VS-050 / 060 / 068 / 087, VS-6556 / 6577
VM series, HSR® series, HS-A1 series
HM series, XR series

Compliance control function

Control the force to protect the workpiece and hand from excessive loads.

Main applications

Product assembly

Supported Robots

VP series
VS series : VS-050 / 060 / 068 / 087, VS-6556 / 6577
VM series, HSR® series, HS-A1 series
HM series, XR series

*When precision is the required force control, please use compliance control function with force sensor (an option available at additional cost).

Optimal Speed Setting

Motion speed and acceleration is optimized to correspond to the payload on the robot tip to reduce cycle time.

Supported Robots

VP series
VS series VS-050 / 060 / 068 / 087 / VS-6556 / 6577
VM series, HSR® series, HS-A1 series
HM series, XR series

Command input support functions

Easily programmable by selecting parameters from the command input screen.

Supported Robots

Compatible RC8A and RC8 robots: All models

Encryption function

Converts the user programs to indecipherable character strings to prevent people other than the authorized person from viewing them.

Specified user program is encryptable.

Encryption key must be stored carefully. Decryption is impossible if the key is lost.

Supported Robots

Compatible RC8A and RC8 robots: All models

Log function

Various logs of robot movements and operations can be recorded, viewed and saved. Data can be used for identification or improvement of errors or failure cause and reduction of cycle time.

Supported Robots

VP series
VS series VS-050 / 060 / 068 / 087 / VS-6556 / 6577
VM series, HSR® series, HS-A1 series
HM series, XR series

Control Panel Function

The teaching pendant screen can be customized as a control panel for robots and peripherals.

WINCAPSIII, the offline programming software, can be used to create screens from PC.

Supported Robots

VP series
VS series VS-050 / 060 / 068 / 087 / VS-6556 / 6577
VM series, HSR® series, HS-A1 series
HM series, XR series

OPC Linkage

OPC UA server functions and client functions can be used for tasks such as linkage to upper hierarchy OPC systems or connection to OPC-compatible devices.

Command Slave Option included

Robots can be controlled from PLC languages (ladder programs). Function block (FB) supports 107 types of robot commands.

Main applications

Robot control from PLC

Supported PLC

SIEMENS / SIMATIC S7-1500

Supported Robots

Compatible RC8A and RC8 robots: All models

b-CAP (communications protocol)

Send motion command packets from PC and PLC and other devices to directly control a robot.

Supported Robots

VP series
VS series VS-050 / 060 / 068 / 087 / VS-6556 / 6577
VM series, HSR® series, HS-A1 series
HM series, XR series

b-CAP Slave

Option included **RC8A** **RC8**

Send PC-generated trajectory data to the controller to control robots in real time.

*Use of the EtherCAT slave board (Motion) enables EtherCAT communication.

Provider

Provider refers to the device interface used to directly control a variety of Factory Automation products (image processing equipment, sensors or hands) from PacScript (DENSO Robotics language).

System configuration diagram

1: This is a free license. Please confirm your company's license at "Check Free license" in the Member's Site area of the homepage.

2: This is an option available at additional cost. 3: Compliance control function with force sensor requires system extensions available separately (at additional cost).

Supports CONTEC Expansion Boards Option included*

Approximately 200 CONTEC expansion boards are supported.

Supported Boards *Additional costs apply to the motion control board expansion option only.

- Analog I/O board
- Analog input board
- Analog output board
- Motion control board*
- Digital input board
- Digital output board
- Serial communications board (RS232C / 422 / 485)

Supported Robots

Compatible RC8A and RC8 robots: All models

Software / Peripheral Device

Result-oriented and more efficient : Expanded DENSO Robotics Solution.

From the implement decision phase to robot maintenance, a variety of helpful production site and factory floor tools are offered to make DENSO Robotics easy to use.

Software Line up

Wincaps® III

Offline Programming Software

Software for programming DENSO Robotics (PacScript, PAC) and creating simulations on the PC

Robot Tools

Utility Application Software

Software to support optimum maintenance and operation of DENSO Robotics based on running costs and daily maintenance

ORiN®2 SDK

Software Development Kit

Middleware used to develop an application program or provider based on ORiN®2 specification

EMU

Robot Simulation Software

Software that enables simulation of multiple DENSO Robotics

RC Vision

Robot Vision Package

Software that utilizes DENSO Robotics and cameras to support equipment startup

VRC

Virtual Robot Controller

An emulator that creates an image of RC8 (robot controller) itself and provides a virtual RC8 environment on the PC

Mobile Tools

Smart Device Application Software

Smart device software that supports DENSO robot maintenance and operation

Software Positioning

Offline Programming

WINCAPS®III is software used to program DENSO Robotics (RC8 : PacScript) and create simulations on the PC.

Functions

Create a program

Use the Program Edit window for programming. The following functions are available :

- Line No. display
- Color support for commands
- Command input support (displays input suggestions)
- Indent display
- Comment block
- Bookmarks

Simulation functions

Execute user-created programs on the PC to check cycle time, robot movement, pose and interference.

- Program startup and stop, breakpoint
- Display and edit variables and I/O
- Interference checking
- Measure cycle time
- Display robot path

Panel screen editor

Create a panel screen for a teach pendant on a PC.

Simple calibration

The following 3 types of calibration can be used :

CALSET	Corrects the CALSET value. Overwrites a CALSET value with the correct value based on a standard position when a motor is replaced or the CALSET value lost.	TOOL	Corrects the value of the selected TOOL. Use when a hand or other end effector is recreated, replaced, or newly created.	WORK	Corrects the value of the selected WORK. All WORK coordinates that were set when the robot mounting position changed can be corrected at once.
--------	---	------	--	------	--

Arm 3D view

Displays the robot and peripheral devices in 3D and simulates robot motion on a PC.

- Import 3D graphic data (VRML and Direct X formats)
- Click on an object to move it to a robot end object and obtain that position data [3D view teach]

Log function

Users can view the following logs :

- Error log
- Operation log
- Trace log
- Control log [command position of each axis, encoder value, current value, payload rate, etc.]
- Variables [PRO name and variable name, type, written value, write source, etc.]
- I/O log [port, type, status, initial value]
- Servo minor axis data log [speed reference value, actual speed, torque command, deviation angle, absolute current value]

Online functions

Connect to the robot controller to use the following functions :

[Monitor function]

Monitor robot status

- 3D view display
- Variables
- I/O
- Execution program
- Log data reception and save

[Debug functions]

Execute programs in the robot controller from the PC

- Adjust robot speed
- Reset all programs
- Start / stop supervisory tasks
- Program start
- Step stop / cycle stop / suspend, halt / program reset
- Step feed
- Mock I/O settings of dedicated input and others

Functions	Full Function Version	Light Version ¹	Trial Version ²

Windows is a trademark or registered trademark of Microsoft Corporation in the U.S. and / or other countries.

System requirements :

OS: Windows® 7 / 8 / 10

PC: CPU 2 GHz or faster multi-core processor,
Memory 2 GB or more, HDD 1 GB or more

Languages supported : 5

Japanese, English, German, Korean, Chinese

1: Included with purchase of mini pendant.

2: Supplied with robot.

3: There are limits to the number of libraries that can be used.

4: Sampling interval : 1 sec.

5: One program (PRO1) only.

Integration Middleware for PC

ORiN®2 SDK is a software tool kit used to develop an application program or provider based on ORiN2 specification.

- It provides a standard communication interface for robots as well as various FA peripherals and databases.
- ORiN®2 SDK is mounted with a variety of functions (including a CAO engine, test program, sample program and skeleton provider auto generate tool) to support development.
- The superior expandability of ORiN®2 supports not only industrial robots, but a variety of devices (including PLC, CNC machine tools, bar code readers and RFID) to enable application development that is independent of manufacturer or model.

Features

Provides a standard interface

ORiN®2 enables easy system development that supports distributed object technologies such as DCOM and SOAP, and provides two standard interfaces : the application interface and device interface.

Recycles applications

Equipped with a gateway to reciprocally connect with different standards (OPC and UPnP) and improve reusability of existing applications.

Development tool options

Use any of the following development tools that support OLE (COM, ActiveX) :

· Visual C++ · C++ Builder · Visual BASIC · Delphi · LabVIEW · Excel and others

Create an original provider

With Provider Wizard, a user can create an original provider to expand functions.

Package Type	ORiN®2 Software Development Kit (ver2.1.21)											
	Provider Development			Runtime + Utilities Set			Runtime			DENSO Products		
Purpose	Provider Development + Execution Environment			Execution Environment + Expanded Components			Execution Environment			Execution Environment (limited to DENSO Products)		
Application	Support	Binary	Source	Support	Binary	Source	Support	Binary	Source	Support	Binary	Source
CAO engine	○	○	—	○	○	—	○	○	—	○	○	—
CAO provider development tools	○	○	—	—	—	—	—	—	—	—	—	—

System requirements : OS: Windows® 7 / 8 / 10 PC: CPU Pentium® III 1 GHz or faster, Memory 512 MB or more, HDD 500 MB or more

Windows is a trademark or registered trademark of Microsoft Corporation in the U.S. and / or other countries.

OPC is a trademark or registered trademark of the OPC Foundation in the U.S. and / or other countries.

ORiN® is a trademark or registered trademark of Japan Robot Association.

Software Robot Tools

Robot Setup / Maintenance Support Tools

Robot Tools is a fully featured suite of utility tools created for optimum maintenance and operation of DENSO Robotics.

- The software streamlines daily maintenance workflow and reduces the running costs of a robot after installation.

Product Features

System requirements : OS: Windows® 7 / 8 PC: CPU Pentium® III 1 GHz or faster, Memory 512 MB or more, HDD 500 MB or more

Image Logger

Help to determine causes of sudden errors and incorrect equipment assembly. Takes images before and after problems happen and saves equipment data (I/O, variables, etc.) at the time they happen. Specifies errors caused through image and data validation to help with improving equipment.

Mobile Monitor

Monitors controller operating status and enables quick response to an error by sending an error notification email to a portable device when an operator is offsite. Contributes to improved maintainability and task efficiency.

Control Log Analyzer

Obtains the control log from a designated controller and automatically displays it in a graph. This graph can be used to analyze robot control status (such as detection of NG waveforms), or the control log can be entered into a database to be compared with past data. Improves maintainability and visualizes (quantifies) an error occurrence.

Virtual TP

A virtual teach pendant on the PC works with a controller set on manual mode, allowing various controller settings (GUI) to be configured and monitored even from a remote location. Improves maintainability and helps a user create settings when no mini pendant or teach pendant is available.

GP Operator

Connect a robot controller to a PC and use a mouse or game pad for easy robot operation. Allows teaching to a designated variable (P type, J type or T type) to assist developer teaching in which a PC is used to control a robot.

Easy Backup

Performs backup and restores all data from multiple controllers in a batch. Automatic Easy Backup reduces task time and Easy Restore enables fast recovery when an error occurs. Contributes to improved maintainability and task efficiency.

Robot Vision Package

RC Vision is a robot vision application software package that utilizes DENSO Robotics and cameras to support equipment startup.

1st EVP Easy Vision Picking

- EVP (Easy Vision Picking) is an image processing application that specializes in Pick & Place without using a program.

Image processing settings are configured using an application (EVP Guidance) on the PC. When executing (EVP Runtime) can be run by RC8 and the camera connected to RC8 only. EVP also includes a calibration wizard that can perform robot calibration and calibration between camera and robot.

The picking device has built-in functionality to output the location of parts that are within the field of vision of the robot, allowing control of parts movement via a feeder or other device.

EVP Calibration Wizard

Correction

- Simply loading the chess board completes the camera calibration.
- A user simply follows the **wizard** to complete calibration of the robot and camera.

EVP Guidance

Settings

- An image processing flowchart can be configured by easy operation **without using a program**.
- Multiple models can be registered and recognized even in a mixed product environment.

EVP Runtime

Execution

- Results can be shown on the teach pendant during execution, making a **PC unnecessary**.
- Image processing and communications programs are not needed to output image processing results to the robot position type (P type) variable.

2nd EIS Easy Image Store

■ Overview of EIS

EIS is a software to store the images of cameras connected to RC8. Images taken by the built-in image processing application (EVP) in RC8 are temporarily stored in RC8, and reset when power is turned off. With EIS, the images can be stored automatically in PC as image files.

■ Expanded image

System requirements : OS: Windows® 7 / 8 PC: CPU 2 GHz or faster multi-core processor, Memory 2 GB or more, HDD 1 GB or more
Camera: Basler GigE camera (ace series), IDS USB camera (uEye SE series), Canon network camera (WebView Livescope series)

Robot Simulations

EMU (Enhanced Multi-robot simulator) is software that allows you to run simulations for multiple DENSO Robotics.

- EMU allows you to use projects created in WINCAPS®Ⅲ, coordinating with peripheral devices (models) and testing functionality in a state that is both virtual and real.
- EMU helps you achieve vertical startup for preliminary testing and production systems at the design stage for equipment centered on DENSO Robotics.

Features

System requirements : OS: Windows® 7 / 8 / 10 PC: CPU 2 GHz or faster multi-core processor, Memory 2 GB or more, HDD 1 GB or more
*Usage of EMU will also require the purchase of WINCAPS®Ⅲ.

Sequence control

You can control all operating sequences for each robot by starting up each robot and using variables and I/O from the system controller program.
Coordinated operation testing using multiple DENSO Robotics is also possible.

Connection with Machine

Connecting with a machine enables you to view current position information for the robot obtained from the machine in a 3D viewer and authenticate motion in a mixed virtual and real environment.

Interference checking

Being able to check for interference between devices and preliminarily test operating sequences ensures a higher degree of perfection at the initial stage of design while helping shorten development times and reduce costs.

Coordination of peripheral devices

EMU enables testing of the operation of all equipment linked to robots and peripheral devices such as workpiece conveyers and loaders without using the actual equipment.

Virtual Robot Controller

As an RC8 (robot controller) virtual robot module, VRC provides an RC8 virtual environment on the PC.

- When programming in a universal language (Visual C++, Visual BASIC, Delphi, LabVIEW, etc.) on the PC, connecting to the VRC lets you control DENSO Robotics and monitor their statuses in a virtual environment.
- Being able to simulate the operation of actual robots without actually using them dramatically improves development efficiency.

Features

Provides GUI

As a tool to make VRC states visible, the VRC Teach Pendant allows for the same usage and monitoring as the teach pendant. This tool enables you to check a variety of information including current position, variables, I/O and the error log.

Simulation Link

Linking to VRC from commercially available simulation software provides feedback of RC8 (virtual environment) information (such as current position [P type, J type, and T type], variables, and I/O), that can be expressed by GUI of various simulation software products. Path and cycle time for robot motion can be expressed just as on the actual machine to provide simulations even closer to actual execution.

System requirements :

OS: Windows® 7 / 8

PC: CPU 2 GHz or faster multi-core processor, Memory 2 GB or more, HDD 1 GB or more

Mobile Tools

Applications for smart devices

Mobile Tools is a set of application software for smart devices that support equipment startup or maintenance using DENSO robots.

Remote TP

- Remote TP displays the screens equivalent to those on the teaching pendant on the smart devices that the user is accustomed, enabling prompt response such as robot controller (RC8) settings or status check by using the smart devices on hand even if teaching pendant or PC is not available.
- This application assists maintenance such as assisting the settings when using the mini-pendant or error/log check when TP is not available.
- This function takes advantage of smart devices features to improve efficiency.

Android Terminal Application

System requirements: [OS] Android 4.1 / 4.2 / 4.3 / 4.4 / 5.0, Tablet screen size: 4.6 inches or larger
[Robot controller] RC8 Ver.1.10.3 or later

Applications can be downloaded from the website free of charge.
<http://www.densorobotics.com/>

Bar Code and 2D Code Products

Auto-recognition products for use in manufacturing

In applications such as...

- Process / progress management
- Shipping and receiving inspection
- Picking
- Inventory management
- Automated lines

Handy Terminal

●BHT-1300 series

- Select from two OSs : Windows OS / BHT-OS
- Ultralight/compact model for exceptional usability.
- 360°readability reduces workhours. (2D code model only)

●BHT-1400 series

- The large 3.2-inch WVGA screen ensures ease of work.
- Applies to any type of working environments with IP65 protect grade.
- The robust design to resist small impact in daily operation as well as large impact assures the safe usage for a long time.

Handy Scanner

●GT20 series

- High-speed reading of QR codes and bar codes.
- Top-of-the-class drop-resistant performance to resist 2m x 60 drops eliminates the risk and assures safety even if dropping the scanner.
- A wide range of functions are allocated to the magic keys to further improve work efficiency.

Direct Marking Support Model

●Fixed scanner : QD25

- Reads 2D codes marked on paper, metal, resin, glass and other surfaces.
- Full adjustment functionality enables reading of deteriorated or altered print.

What is direct marking?

Used increasingly in a number of sectors, direct marking enables printing in small spaces, which eliminates the need for paper and lowers operation costs. Reads 2D codes created by laser marker or dot pins used to print directly on a product or part.

Support

Web Site

Domestic visitor site

<http://www.denso-wave.com/en/robot/>

These sites are available for robot product information (features, specification, external dimensions), support (such as FA school and FA seminar) and other inquiries.

e-learning

<https://www.denso-wave.com/en/robot/support/learning/>

The DENSO digital learning system provides the first step to have command of DENSO robots.

Trainees learn basics and procedure of robot operation and programming.

It is helpful for the beginner of the robot operation; by understanding the basic robot operation and the procedure, you can handle and solve the unexpected troubles.

Member site

Register on the member site for download services (such as robot CAD data, software, user's manuals and robot programs*) as well as access to our information search service (FAQ).

*Customers who have not yet purchased a product may use the "Robot CAD Data and Software [Trial Version]".

Technical Support

Robot School

Periodic

The wide array of instruction available at our Training Center ranges from "Basic Operation of DENSO Robotics" to instruction in "Advanced Use" for every robot model. Regularly scheduled instruction in inspection and repair skills are also held at the Maintenance School.

On-demand

Trainees learn by actual operation of the teaching devices prepared for each lecture course. Course detail is determined after coordination of the schedule and lecture courses among the customer and our sales staff. The lecture courses can be held at our head office in Aichi prefecture or the venues specified by the customer.*

*In this case, material transporting cost, travel cost of instructors, etc. shall be paid after agreeing on the cost.

FA School Office

TEL : +81-569-49-1587 E-mail : fa-school.seminar@denso-wave.co.jp

Robot verification testing

A system of Application Tests is available at the FA Application Center, which is equipped with all types of robots to use in cycle time tests, examination of equipment layouts and other pre-evaluation testing.

*If you require testing, please apply to your nearest sales office or from the DENSO Robotics homepage.

Technical Support Center

The Center responds to inquiries regarding the robot's detailed functions and performance as well as control, programming and other technical aspects of use.

FA Technical Support Center Desk

TEL : +81-569-49-1591 (Weekdays 9:00 – 12:00 and 13:00 – 17:00 Japan Standard Time)

E-mail : fa-support@denso-wave.co.jp

Service

Customer Service

Customers in Japan

	Service	Description
1	Business Trip Repair Service	Repair service when an error occurs A service technician travels to a site to perform repairs.
2	Send in for Repair Service	Repair service provided at our Repair Center We repair any product or parts sent in to us.
3	Broken Part Analysis Service	Investigation and reporting of causes of malfunctions Helps in clarifying and eliminating causes.
4	ANSHIN Inspection Service	Regular maintenance inspections A service technician performs regular maintenance inspections on-site. *Optional plans for things like bulk discounts and warranties are also available.
5	ANSHIN Refresh Service	Inspection and overhaul service Conducts motion inspections and surveys repairs, overhauling, and shipping. *Supported products: robot unit, controllers, teach pendants
6	Substitute Product Rental Service	A service for renting out substitute robot unit, controllers, etc. This service is provided during periods when we conduct our "ANSHIN Refresh Service". *Loans may not be possible depending on the model.
7	Robot School (Maintenance)	Training in maintenance (1) Regular school: participants acquire maintenance knowledge pertaining to areas such as regular maintenance inspections, functional parts replacement, and troubleshooting. (2) Business trip school: maintenance education carried out on-site using actual customer machines. (3) Individual school: maintenance education tailored to individual customer needs.
8	[Optional Service] ANSHIN Call 24 hour service (annual contract)	24-hour maintenance and technical support service by telephone, available overnight and on holidays (1) Skilled technicians provide overnight and holiday troubleshooting support. (2) Same-night delivery of parts needed to get robots restored. *Provided as a set with the "ANSHIN Inspection Service".
9	[Optional Service] ANSHIN Warranty Extension Service	This service is an extension of warranty period. Maximum warranty period extension is 36 months. * However, the maximum warranty period extension shall be within the 12,000 hours after starting running (operating).

Overseas Factory Customers [Support for robots relocated outside Japan]

DENSO provides a reliable support system that can be used overseas.

A Global Warranty Service is also available in addition to the general service for greater security.

	Service	Description
1	General Overseas Service ¹	Support offered by the local vendor or service center ² (1) Technical consult at a local office (2) Send in for repair (3) Spare and service parts available for local purchase (4) Maintenance education
2	Global Warranty Service ³	Support offered by the local vendor or service center Provided in addition to the above services: (5) Extended warranty period: 12 months → 24 months Discounted service fees unavailable to non-contracted robots are offered for contracted robots.

1: This is a paid service that includes support for product malfunction.

2: Service in regions without a DENSO service center will be handled at factory headquarters in Japan.

3: A contract fee is required to use this service.

As a rule, only robots supported at the local site are applicable for this service.

Regions Supported by DENSO Service Centers	
North America	USA, Canada, Mexico, Brazil
Europe	Germany, Italy, France, Great Britain, Netherlands and other European countries
Asia	China, South Korea, Taiwan, Thailand, Singapore, Malaysia, Vietnam, India, Indonesia

Service Contact

Please contact the domestic service centers listed on P.74 for inquiries on the robot repairs, maintenance service and maintenance training.

To ensure safe usage of products

- Please read the instruction manual thoroughly and use products following proper procedures.
- For ease of clarity and understanding, safety equipment and devices stipulated by law such as safety fences are not shown in photographs and illustrations in this catalog.

- For information of the export of products, please see "Export Control" on our website at <http://www.denso-wave.com/ja/robot/support/export/>.
- If robots are to be used overseas, purchase of safety-specification products and subscription to our ANSHIN Overseas Service is recommended.
- DENSO Robot, DENSO Robotics, HSR and WINCAPS are registered trademarks of DENSO WAVE INCORPORATED.
- ORIN is a registered trademark of Japan Robot Association. COBOTTA is registered trademark of DENSO CORPORATION
- The data in this catalog is current as of March, 2018 and is subject to change without notice.
